PROJECTS

E-Commerce Platform (Monolithic Architecture)
- Built a scalable E-commerce application with NextJs and Postgres to implement ACID.
- Tanstack-Query, Axios, and Zustand were used for data fetching and state management.
- Authjs was used for authentication, with Cryptomus and Stripe for payments.
- Redis was implemented for caching, and NGINX was used for load balancing and scaling.
- Best API practices were used, such as idempotency, rate limiting, data validation, and retry logic.

Live Chatting Platform
- Built a high-traffic Real-time communication platform with a focus on scalability and real-time performance.
- Docker, Redis, Kafka, and PostgreSQL are used to build a solid and scalable architecture.
